

Architecture Design Report

This document presents the architectural design of the system, including its context, logical structure, runtime behavior, and deployment considerations.

1. System Requirements

System Name: ResuFit: Precision CV Matching System

Architecture Style: Layered (N-Tier)

Functional Requirements

- Submit CV
- View and Edit CV
- Answer Screening Questions
- Get Rating for CV

Non-Functional Requirements

- Performance

Description: The system **MUST** respond to user requests within 2 seconds.

- Reliability

Description: The system **SHALL** be available 99.9% of the time.

- Security

Description: The system **MUST** protect user data and **MUST NOT** store sensitive information.

- Privacy

Description: The system **MUST NOT** collect or store user data without consent.

- Scalability

Description: The system **SHOULD** be able to handle 1000 concurrent users.

- Usability

Description: The system **MUST** be user-friendly and **MUST** provide clear instructions.

- Maintainability

Description: The system **SHOULD** be easy to modify and update.

- Compatibility

Description: The system **MUST** be compatible with major browsers and **MUST NOT** have any known security vulnerabilities.

- Integration

Description: The system MUST integrate with HR module from Odoo ERP software.

2. Formal Architecture Specification (ACME ADL)

The following section provides a formal architectural specification using ACME ADL, capturing components, co

```

System ResuFit:PrecisionCVMatchingSystem {
  Property view : String = "runtime";
  Property architectureStyle : String = "Layered (N-Tier)";
  Property source : String = "AI";
  Component SubmitCV = new Component {
    Port in;
    Port out;
    Property responsibility : String = "Applicants can submit their CVs for parsing and analysis.";
    Property state : String = "stateless";
    Property scaling : String = "horizontal";
  }
  Component ViewandEditCV = new Component {
    Port in;
    Port out;
    Property responsibility : String = "Applicants can view and edit their parsed CV.";
    Property state : String = "stateless";
    Property scaling : String = "horizontal";
  }
  Component AnswerScreeningQuestions = new Component {
    Port in;
    Port out;
    Property responsibility : String = "Applicants are presented with screening questions defined by";
    Property state : String = "stateless";
    Property scaling : String = "horizontal";
  }
  Component GetRatingforCV = new Component {
    Port in;
    Port out;
    Property responsibility : String = "Applicants receive a rating for their CV based on the simila";
    Property state : String = "stateless";
    Property scaling : String = "horizontal";
  }
  Attachment SubmitCV.out to ViewandEditCV.in {
    Property delivery : String = "at-least-once";
